

## **One of Nation's Top Ten Long-Term Care Providers Adopts New Technology** *SunBridge Healthcare Corporation adopts PointClickCare Software-as-a-Service*

---

(MINNEAPOLIS– August 20, 2008) – PointClickCare, (PCC) a company exclusively dedicated to providing Software as a Service (SaaS) applications, today announced that industry giant SunBridge Healthcare Corporation (SunBridge), a subsidiary of Sun Healthcare Group, Inc. (SHG), will be taking advantage of the revenue cycle management, marketing and certain aspects of its Electronic Health Records (EHR) software, allowing them to consolidate their existing multiple technology applications into an integrated Software-as-a-Service model of applications. SunBridge joins HCR Manorcare and Genesis HealthCare, two other top 10 long term care providers who are also using PointClickCare. The addition of SunBridge to the growing list of adopters using PointClickCare's simple software technology, gives PCC a leading edge in the software technology industry, managing more than 41 per cent of the nation's largest long-term healthcare companies.

“We're excited to have SunBridge join our family of long-term healthcare providers who have chosen our product,” said Mike Wessinger, CEO, PointClickCare. “In the past three years we have seen amazing growth where we have now reached a tipping point where companies are embracing software that mirrors the simplicity that the consumer web model brings.”

SunBridge announced its changeover this month to PointClickCare. Prior to the end of 2009, SunBridge plans to implement the full financial and marketing modules as well as the base clinical functionality that will allow for expansion to a complete electronic health record in future years. The rollout will include all 211 SunBridge centers across 25 states. SunBridge provides skilled nursing, mental health, long-term care and assisted living services.

“Our management and staff welcome the transition to PointClickCare,” said Slayton Austria, CIO who provides technical support services to SHG. “We carefully analyzed the options and chose PCC for what their software offers our centers and also, our patients and residents. PCC will replace our current applications with its user-friendly online delivered software. It's as intuitive as any of the consumer websites available, with no maintenance, which allows us to remain focused on our clients, and leaves the IT to PointClickCare.”

SaaS applications are owned, managed and maintained remotely and characterized as simple, intuitive, and meant for mass- use in multiple locations. In fact, it is so user-friendly, that the healthcare industry with stereotypically low budgets and technology is now adopting it at great speed.

### **ABOUT POINTCLICKCARE:**

PointClickCare is the leading electronic health records and business office software for the Long-Term Care industry. PointClickCare Software-as-a Service (SaaS) has been online, serving providers of all sizes, since 2000 and is used by more than 3,000 long-term care centers in 40 U.S. states and across Canada serving over 300,000 residents.
